

Unitized Translucent Building Envelope Solutions

Element LA Architect: Gensler Los Angeles, CA

UniQuad® - a unitized insulated translucent panel system developed for high-performance building envelopes. This comprehensive system offers exceptional design versatility that allows you to combine the performance you need with the look you want.

- Unitized System - Quick, Cost-Effective Install
- RST - Removable Skin Technology
- Long-Span Capability - Slab to Slab
- Bi-Color Design Options
- Energy Savings - Superior Thermal Performance
- Rainscreen Design
- Specialized Performance Options
 - Dynamic Shading
 - Forced Entry
 - Sound Reduction
 - Additional Insulation
 - Hurricane Resistant Certification

UniQuad is factory glazed and assembled for superior quality control.

*Explore what's possible when
Imagination meets Innovation*

Spanning capabilities are governed by the deflection limitation of $L/120$ as specified by the building code (IBC 1604.3.1)

UniQuad
Unitized Daylighting System

RST - Removable Skin Technology

The unique two panel design ensures that the building envelope remains sealed and that its integrity is not compromised. The interior panel is protected from exterior weather conditions, UV radiation, impact and other hazards, and can remain intact for the life of the building. Each panel can be removed independently without removal of the entire system, allowing building operations to remain uninterrupted.

Renew the life of the building envelope at a marginal cost!
